CEMULSION WALL PUTTY
WHITE CEMENT BASED POLYMER PUTTY

Cemulsion wall putty is a specially designed filler based on white cement, re-dispersible polymer and functional additives for application on all types of suitable exterior and interior substrates to give a smooth and uniform finish.

It can be used for filling and smoothing out cracks and dents on exterior and interior masonry, cement-plastered walls, asbestos, concrete, plywood, gypsum board etc.

APPLICATION

WALL PUTTY MIXING
- Take potable water @ 40% of the required putty (1 kg putty + 400 ml water) for mixing
- Slowly pour the putty into water and mix till it attains a consistent & uniform workable paste. Leave the mix for 5-10 minutes before using

METHOD OF APPLICATION

- Apply first coat from bottom to top direction with a putty blade and wait for 4 hours
- After the first coat dries, clean the surface with a dry cloth
- Apply the second coat from top to bottom direction with putty blade
- Wait for 12 hours
- Maintain a maximum thickness of 1.5mm for 2 coats
- Clean the surface with a fine emery paper before applying paint
- No curing required after application
- Apply the paint once the surface becomes hard dry
